Rotac Plus

Automationware

48 65 85
100 130 200

Precision, structural solidity and positioning repeatability
wide range of engineered solutions

Supported by continuous innovation

A new range of Rotary Actuators is the complement to the range of **Automationware** products.

Renewed range on the basis of our experience in the design of custom products, allowing the adaptability for a wide range of Rotation Motion applications, also with high stiffness and high load capacity.

Various introduced novelties, such as the double bearings with shafts, the long lasting, high performance belt-drive transmission system, coupled with Pulley with 0 Backlash, micrometre regulation of the tensioning system.

The new **Rotac Plus** can be motorized by the customer, leaving the characteristics of the precision repeatability unchanged, thanks to the stability of the mechanical transmission solution.

Available in 6 sizes: **48, 65, 85, 100, 130, and 200**, they are structured in aluminium with precision processing on all surfaces, anodized and with Holes for the easy placement on all sides.

Essential Elements

- Very good positioning repeatability
- High performance belt transmission in Kevlar Aramid with mechanic for the micrometre regulation
- Inextensible to the nominal torque also with bi-directional movement
- Precision in the positioning system coupled with Pulley with 0 Backlash
- Can be used in hostile environments (*Belt specification -30° + 100° C*)
- Wide holes for cables and connections
- Mandrel with different connection-layouts and pin references
- Optional, direct stepper or brushless motorization, or with planetary high efficiency gearbox
- Incremental encoder up to 10000 Pulse/Round. Absolute encoder (*Optional*)
- Option available on request, HPR with high resolution Encoder
- Planetary gearbox 4-6-8, or on Application-specific, available.

The use of innovative transmission techniques invalidates the expansionary and the contractive effects of the belt, giving the possibility of micrometre calibration for a very accurate and stable positioning.

The mechanical layout ensures also with motorisations chosen by the customer a very good positioning repeatability and gives a good alternative to the complete embedded solutions.

The available motorisations are Brushless or Stepper with incremental encoder control or absolute encoder (*optional*).

The Package control Software is also available, with the possibility to program up to 64 positions (**Rotac EASY™**): Rotac can also accommodate the new **AwareVu** to control the system vibrations. (*Page 8*)

Benefits

- **Excellent price-to-performance ratio**, alternative solution, low maintenance
- **Applicability** in situations with essential speed and accuracy
- **Versatility**. Supporting base for the **AW Mini-SCARA** configuration
- Use in hostile environments (*thermal excursions of the belt -30° a +100° C*)
- Motorisation chosen by the customer, **Brushless or Stepper AW motor** solutions with drivers and high precision encoder
- **Easy coupling** with gearboxes, motor on both surfaces
- **Configurable** with other **Automationware** products (*Linear axes or SM-series slide*)
- Control Software for the easy system programming

Application

Electronics production

Very useful for the positioning of the electronic components or silicon wafers. They can be coupled to Pick and Place systems, for the high precision and high speed rotation. The HPR option (*High Precision Rotac*) allows a very high positioning repeatability.

Diagnostic and quality control

If the rotating movement can be combined with scanning systems for the quality control requiring the accurate positioning without fluctuations (*ringing*) or anomalous vibrations

Laser Scanning

Ideal system for the installation of a laser for 2-3D applications for geographic, archaeological scanning and for reverse engineering. Possibilities for Bar code systems applications of the production or storage systems.

Production and filling

Very useful in the production, to modulate the movement of the containers with liquid, and it is necessary to accelerate or decelerate with pre-established curves; impossible with pneumatic actuators.

Packaging and/or Material Motion

Extremely useful for the packaging, also combined with the Automationware SM series (*high speed electric slides*), if scalable torque, high precision and positioning reliability are necessary.

Aerospace and Defense

For the applications of "Digital Sentinel" with installation of fast cameras or laser systems to identify territory violations. They can be also used on board of aircrafts for territorial scan applications.

Factory automation

Excellent for the industrial production chains, to find a rapid solution for eventual line problems (*glass insertion for the manufacturing application in the automotive sector*).

Machine tools

Useful to move elements of the machine tools as support of automation systems, thanks to the high speed and precision (*manufacturing and processing machines for the production of small mechanical components such as keys and automotive components*).

Rotac Plus

Automationware

High Performance Rotary actuator based on a solid monolithic system, providing precise accurate and repeatable positioning. (Up to 70 Nm)

Mandrel

with pin references and several holes for an easy connectivity to tables or accessories

Solide Double Bearing

System with high possibility of heavy radial payload, lubrications free
Isolated IP65

High performance Aramid of Kevlar Belting

system, offering high level protection for Hostile environment
(-30° + 100° C.)

Pulley with Backlash 0

Stepper or Brushless motor driver

Encoder

High resolution encoder for precise and accurate positioning **Option HPR** (High Position Repeatability up to 0,002°)

Planetary

High efficiency gearbox

Solid Double Bearings

System with lubrications free
Isolated IP65

Rotac Plus

Automationware

Automationware considers the new market trends ind. 4.0, develops a new control platform called AwareVu.

The new product can be applied on each Rotac or combined with other Automationware components to control the vibration profile of the system during the processing cycle, activating an alarm in case of malfunction.

The alarm can be visible through a local LED light or recognised via Wi-Fi in the machine computer on the AW application.

Models and Specifications

Brushless : ROTAC PLUS - Hollow Rotary Actuator
